Comments
(Set forth by above question #, if applicable.
Use "Additional Comments" Sheet, if needed)

File #:	95-292551	•
#1: It cannot	t be determined that appropriate tests were performed. Examinations w	vere done for hair and fiber
transfers, bu	it the basis to report the hole in the Q2 shirt is consistent with the type	of hole which would be made
by the specia	men Q1 knife cannot be determined.	
#2: Docume	ntation is poor. The notes are not dated and are in pencil and not ink.	The characteristics that identify
the hole in th	he shirt as a possible stab cut are not documented, nor is the width of the	he knife blade. The report
correctly sta	tes there is no association that can be made between the knife and the	shirt based upon hair and fiber
evidence.
